FOR IMMEDIATE RELEASE

VersaLogic announces Ethernet expansion module for PC/104-Plus systems

Eugene, OR — May 2, 2011 — VersaLogic Corp., an Oregon-based manufacturer of embedded computer products, today announced the release of the VL-EPM-E2 embedded expansion module featuring high-performance network capabilities and extensive ruggedization features.

Based on the industry standard PC/104-Plus form factor, the VL-EPM-E2 provides for simplified stack-up expansion with PC/104-Plus CPUs and expansion modules. The VL-EPM-E2 is available with single or dual Fast Ethernet ports using standard RJ45 output connectors. For extremely rugged applications, a dual Ethernet configuration with latching header connectors is available. All VL-EPM-E2 configurations are designed and tested for operation over the full industrial temperature range (-40° to +85°C) and meet MIL-STD-202G specifications for mechanical shock and vibration.

The Ethernet controller features auto-negotiation for simplified configuration and each Ethernet port is independently configurable as a separate subnet. On-board LEDs provide Link/Activity and Speed status for each Ethernet port with an additional header for external LED support. Software drivers are available for a wide variety of operating systems to provide a complete high-performance networking solution.

The VL-EPM-E2 includes VersaLogic's 5+ year production life guarantee and is customizable even in low OEM quantities. Customization options include conformal coating, revision locks, custom labeling, customized testing and screening, connector changes, and additional services.

This new expansion module is available from stock starting in May of 2011. Pricing starts around \$170.00 in OEM quantities. Contact Sales@VersaLogic.com for more information.

About VersaLogic Corporation

A leading supplier of industrial computers since 1976, VersaLogic focuses on high-quality board-level products for embedded OEM applications. Its 5+ year production life guarantee and outstanding warranties demonstrate a commitment to service. Product platforms include EBX, PC/104™, PC/104-Plus, PCI-104, EPIC™, SUMIT™, and SPX™. For five consecutive years, VersaLogic has received the coveted "Platinum" level vendor rating based on independent user surveys by technology research firm VDC Research Group, Inc. VersaLogic is registered to the ISO 9001:2008 standard. For more information, visit www.VersaLogic.com.
